

SORTING WASTE CAN BE CHILD'S PLAY

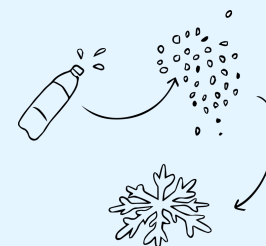

Encouraging today's youth to recycle is a major challenge that we have met in a fun, creative way. We have made this vital step a fun and playful collective act thanks by creating amusing animal-shaped bins.

Set up in town centres or on beachfronts, whales, trains and other fantasy creations house recycling bins. They will allow you to organise the collection of plastic bottles, which will be recycled to produce Christmas decorations for your town.

These Recyprint structures are used to manufacture Christmas decorations that are as festive as they are sustainable!

Collect and recycle in a fun way to create recycled decorations.

Recycled bottles already used in our Christmas decorations

MANUFACTURING YOUR DECORATIONS

Each year 500 billion plastic bottles are produced, many of which are discarded in the countryside or the oceans.

The plastic bottles collected are recovered by specialised organisations which process the bottles to provide us with the raw materials we inject into our printers.

This method helps to limit greenhouse gas emissions and prevent plastic bottles from polluting the earth and seascapes, as far as possible.

This is a real tangible example of circular economy.

The collage illustrates the 'Les tortues du plastique' (The Plastic Turtles) art installation. It features several images: a large blue turtle sculpture made of plastic bottles, a brown turtle sculpture, a sign explaining the project's goal to recycle plastic bottles for Christmas decorations, a person interacting with the installation, and a close-up of the plastic bottle texture. The text on the signs includes 'Je trie, on recycle, nous décorons !' and 'Les bouteilles en plastique déposées ici seront recyclées et utilisées pour la fabrication des décorations de Noël de votre ville.' The 'RECY PRINT' logo is also visible.

TECHNICAL DETAILS

- A door integrated into the decor allows you to quickly enter and exit the bin to empty it (standard size).
- Each decoration features recycling information, to raise people's awareness and highlight our goal: to create Christmas illuminations with the bottles.
